👤 PROFILE

Software Engineer with **8+ years of experience** building software applications, solutions and platforms for clients in the **USA, the UK and Colombia**, from start-ups to global companies such as **EPAM Systems, Perficient and Billtrust**. Currently working as a **Software Solutions Architect** and **Forward Deployed Engineer**: designing system architecture, working directly with clients to understand how their operations run, and turning that into production-ready software from MVP to launch.

Specialized in **web full-stack development** with a back-end focus, mainly in **Python** and **JavaScript/TypeScript**: building APIs, data-heavy platforms and web applications, and taking them to production in the cloud. Uses **AI-assisted development** with **Claude Code** (custom skills, hooks, agents, subagents and orchestration) and **GitHub Copilot** to ship faster without lowering quality.

Delivered products in travel, fintech, AI, real estate, advertising and e-commerce, from analytics dashboards and payment integrations to legacy-system migrations. Vetted in **Toptal's top 3%**.

👛 EXPERIENCE

Software Solutions Architect |  **Cielo Travel**

Mar 2026 – Present · Remote · Full-time

Roles: Forward Deployed Solutions Architect, Software Solutions Architect, Back-end Lead

Building an internal logistics platform from scratch to automate a travel company's airport pickups and returns, which were previously managed in spreadsheets.

- Designed the platform's architecture and now lead its back-end development, from MVP toward a scalable product.
- Replaced manual, spreadsheet-based operations with automated workflows, consolidating scattered spreadsheets and databases into a single source of truth.
- Built scheduling for airport pickups and returns and integrated Stripe, so bookings and payments now run in one system.
- Work directly with the operations team as a forward deployed solutions architect, turning their day-to-day processes into product features.

Tech: Python, FastAPI, Node.js, PostgreSQL, Next.js, React, Tailwind CSS, Stripe

Freelance Senior FDE |  **Toptal**

Sep 2024 – Present · Remote · Freelance · Member of Toptal's top 3% network since September 2024

Roles: Senior Forward Deployed Engineer, Senior Full-Stack Web Developer

Short-term freelance contracts for Toptal clients.

 **Evidenza Inc.** · TypeScript Developer

May 2025 – Jun 2025

Built a standalone TypeScript module that generates PowerPoint presentations from raw survey data.

- Validated feasibility early with a proof of concept that reproduced the most complex slide layouts in PptxGenJS and documented the library's limits.

- Built a theming system and tested core slide elements, turning every designed layout into a reusable, on-brand slide template.
- Composed the templates into full presentation sections and delivered a feature-complete module, ready to plug into the client's codebase.

Tech: TypeScript, Node.js, PptxGenJS, npm

Taxalign Limited · Full-Stack Developer

Mar 2025 – Apr 2025

Product: Taxalign client onboarding & checkout form

Added a client onboarding and checkout flow to a UK online accounting firm's Framer website.

- Built a custom multi-step onboarding form inside the Framer site that captures client details and terms-and-conditions acceptance.
- Automated company lookups with the UK Companies House API, so clients no longer type their company data by hand.
- Connected submissions to HubSpot CRM, generated PDFs automatically and added Stripe checkout, turning the form into an end-to-end paid onboarding flow.

Tech: Next.js, React, Node.js, Framer, Stripe, HubSpot CRM, Companies House API

Senior Software Engineer | **Billtrust**

Feb 2024 – Mar 2026 · Remote · Full-time · Angular & Python (FastAPI) Engineer

Product: Billtrust Payment Analytics Dashboard

Analytics reporting module for payment-processing performance, with interactive dashboards, drill-downs and PDF, CSV and XLS export.

- Built interactive dashboards that give clients a clear view of payment-processing performance through metrics such as Envelope Volume and Payments Processed.
- Added drill-downs from summary metrics to individual envelope and line-item matches, so users can trace any number back to its records.
- Moved heavy data work into async background jobs through middleware, keeping the UI responsive on large Snowflake and MongoDB datasets.
- Found and fixed bugs and performance bottlenecks, and refactored front-end and back-end code for speed and long-term maintainability.

Tech: Angular, TypeScript, PrimeNG, HighCharts, Python, FastAPI, Node.js, GraphQL, Apollo, Snowflake, MongoDB, Docker, AWS, Jenkins, Cypress, Datadog

Software Engineer | **Capitol AI**

Dec 2023 – Feb 2024 · Remote · Full-time · React/Next.js & Python (FastAPI) Engineer

Product: Capitol AI creativity platform

AI-powered creativity platform that helps writers, artists and marketers generate ideas and create content.

- Built the story/document printing feature across the UI and the AI back end, letting users export the content they generate.
- Fixed bugs across the UI and the AI back end, and refactored the codebase for performance and maintainability.
- Improved the platform's responsiveness and usability across devices and browsers.

Tech: React, Next.js, TypeScript, Node.js, Python, FastAPI, WebSockets, PostgreSQL, Docker, Vercel, Cloudflare, Storybook

Senior Software Engineer | Olive Tree Holdings

Jun 2023 – Nov 2023 · Remote · Full-time · React/Next.js, DevOps & Python Engineer

Product: Mako (Project M) real-estate broker portal

Platform for multi-client and tenancy brokers that auto-generates legal, financial and marketing documents.

- Built a module that collects property data and feeds it into auto-generated offering memorandums and deal packages, cutting manual work for brokers.
- Helped build a shared component library that keeps the platform's UI consistent.
- Optimized infrastructure and CI/CD on GCP with Pulumi for more reliable deployments.

Tech: React, Next.js, TypeScript, Node.js, Python, Django, PostgreSQL, Docker, GCP, Pulumi, Bitbucket

Software Engineer | EPAM Systems

Nov 2021 – May 2023 · Remote · Full-time · Node.js & Python Developer

Modernization of the client's internal enterprise applications and infrastructure.

- Successfully migrated two internal enterprise applications (Node.js/TypeScript and Angular) off legacy technology.
- Migrated databases and API endpoints to Snowflake and SAP HANA, modernizing the client's data stack.
- Streamlined frequent employee workflows and fixed bugs in the React and Angular front ends.

Tech: Node.js, NestJS, Express.js, InversifyJS, TypeScript, React, Angular, NgRx, RxJS, Python, FastAPI, Jest, Supertest, Snowflake, SAP HANA, Azure DevOps, Grafana

Mid-Level Software Engineer | Perficient

Apr 2021 – Nov 2021 · Remote · Full-time · JavaScript & Python Developer

Product: Kinesso advertising syndication console (Interpublic Group)

Console that helps Interpublic Group (IPG) clients manage audiences, syndicate content and report on performance.

- Led the syndication module, owning its new implementations and support.
- Rolled out a new look and feel across the app by migrating its styles with CSS and Sass.
- Turned client needs into features and advised the product owner on UX.

Tech: JavaScript, TypeScript, React, Angular, NgRx, RxJS, D3.js, SCSS, Python, Flask, MySQL, Karma, Jasmine, Jenkins

Junior Software Developer | SC Computing

Jul 2020 – Apr 2021 · Hybrid · Full-time · Angular & Python Developer

Product: SisteCrédito payment gateway and website

SisteCrédito's software development company: payment gateway for individual customers, the company website and an e-commerce recommendation system.

- Cut company costs by retiring a third-party payment gateway and integrating payment methods directly.
- Helped found the Python back-end team and set its coding standards and best practices.
- Built data services and a product-recommendation system for the company's e-commerce app.

Tech: Angular, TypeScript, Sass, Python, Flask, SQLAlchemy, MySQL, MongoDB, Azure, Docker

Junior Software Developer | **Educatic**

Feb 2020 – Jul 2020 · Hybrid · Contractor · Python & JavaScript Developer

Product: PLEYADES student-dropout analytics platform

Machine-learning platform that predicts and analyzes student dropout, from country level down to individual students.

- Built the dropout-prediction software with scikit-learn, backed by multi-database data services.
- Deployed and maintained web apps and APIs on client infrastructure, and streamlined Python deployments across environments.

Tech: Python, Flask, scikit-learn, Pandas, NumPy, Plotly, React, Angular, MySQL, SQL Server, NGINX, Unicorn

Freelance Software Developer | Independent clients

Aug 2018 – Dec 2020 · Hybrid · Freelance

- Developed a curricular-management web app with modules for the academic calendar, configuration and administration.
- Implemented MEVN and MERN architectures for client projects, and documented database models in Oracle Data Modeler.

Tech: React, Vue.js, Angular, Node.js, Express.js, NestJS, Python, Flask, FastAPI, PostgreSQL, MySQL, Oracle, MongoDB, Docker, AWS
