SKILLS

JavaScript

Python

React

Angular

Node.js

TypeScript

Next.js

FastAPI

Flask

Nest.js

HTML5

CSS3

Git

SQL

Docker

Linux

PostgreSQL

Agile Scrum

MySQL

MongoDB

PROFILE / ABOUT

Mature and skilled **Software Engineer** with **6 years** of time-served experience working in the information and technology industry. Focused on web full-stack development with **Python** (Flask, **FastAPI**, Django), **JavaScript** (Angular, **React**), and **Node.js** (**Next.js**, Express.js, Nest.js), involved in projects in the fintech, real estate, academic, transport, costing, and advertising industries with clients in the USA and Colombia, including service providers, micro-businesses, entrepreneurs, start-ups, and global companies. Technical experience is mostly on the front-end side with **JavaScript/TypeScript** to develop full web responsive applications and on the back-end with **Python** and **Node.js** for APIs and web client applications.

Open and eager to learn new technologies to build professional skills and upgrade knowledge in software engineering. Good communication, problem-solving, analytical, and interpersonal skills; always open to learning and growth; a warm and close person; who likes to be around an excellent work environment; great communication skills; and a disposition to comply with requirements go beyond doing my job the best, to taking on different roles on a project and doing whatever the requirement takes to reach the goal.

EMPLOYMENT HISTORY

Software Engineer at **Billtrust**

Colombia (remote), Full-Time
February 2024 — Present

Project Roles

JavaScript (Angular) Developer, **Python** (FastAPI) Engineer

About Project

An analytics reporting module that offers a robust overview of payment processing performance with interactive dashboards and key metrics like Envelope Volume and Payments Processed. It features detailed drill-down capabilities for envelope and line item matches, customizable views by date and match type, and supports exporting data in PDF, CSV, and XLS formats. The module enhances user experience by providing efficient tools for monitoring and optimizing payment processes, ensuring detailed insights and streamlined reporting.

Participation

- Developed and enhanced interactive dashboards to display key payment processing metrics.
- Created and integrated detailed drill-down capabilities for users in the UI.
- Identified and resolved bugs and performance issues, improving the user experience.
- Integrated databases and storage services with middleware for async and background jobs.
- Refactored and optimized front-end and back-end code for better performance and maintainability.

Team

2 FullStack Developers, 2 FE Developers, 2 Data Engineers, 1 QA tester, and 2 Tech Leads

Tools

Gitlab, VSCode PyCharm, Cypress, Pendo, DataDog

Database

Snowflake, Mongo

Technologies

JavaScript, Angular, **Python**, FastAPI, **Node.js**, Docker, GraphQL, Apollo, Typescript, Docker, AWS, Jenkins, HighCharts, PrimeNG

Software Engineer at **Capitol AI**

Colombia (remote), Full-Time
December 2023 — February 2024

Project Roles

React & Next.js Developer, **Python** (FastAPI) Engineer

About the Project

An innovative platform designed to enhance creativity using artificial intelligence. The app offers various AI-powered tools that assist in generating ideas, creating content, and improving productivity. Its features are tailored for artists, writers, marketers, and other creative professionals, aiming to streamline their workflow and inspire innovation.

Participation

- Contributed to the development and enhancement of Capitol.ai
- Developed and integrated the story/document printing functionality in the U and AI BE.
- Identified and fixed existing bugs and issues within the UI and AI BE.
- Refactored and optimized the codebase for better performance and maintainability.
- Improved UI responsiveness and usability across various devices and browsers.

Team

5 AI BE developers, 2 Back-end, 5 Front-end, 1 QA tester, and 2 Tech Leads

Tools

Github, VSCode, Storybook, Fullstory

Database

PostgreSQL

Technologies

React, Next.js, **Python**, FastAPI, **Node.js**, Typescript, Docker, WebSockets, Clojure, Cloudflare, and Vercel

End of Phase: End of series A phase.

Software Engineer at **Olive Tree Holdings**

Colombia (remote), Full-Time
June 2023 — November 2023

Project Roles

React & Next.js Developer, **DevOps** & **Python** Engineer

About Project

Real state portal/console for multi-client (company) and tenancy brokers. As a full-stack developer, I implemented new features and maintained, and supported the system to improve and make broker and sponsor transactions easier and faster daily, focusing on the auto-generation of legal, financial, and marketing products and files like offering memorandum, deal packages, and more.

Participation

- Collaborated with the community to develop a library for the company's needs.
- Optimized the company tech process on infrastructure and CI/CD.
- Developed a module to recollect property data and embedded it in auto-generated files.

Team

1 Back-end, 1 Front-end, 1 QA tester, and 1 Project Manager

Tools

Bitbucket, VSCode, GCP, Pulumi

Database

PostgreSQL

Technologies

React, Next.js, **Node.js**, Typescript, **Python**, Django, Docker, and Google Cloud Platform

End of Phase: The company's IT department closed due to a real estate crisis.

EMPLOYMENT HISTORY

Software Engineer at **EPAM Systems** <epam>

Colombia (remote), Full-Time

November 2021 — May 2023

Project Roles

JavaScript & Node.js Developer, **Python** Developer

About Project

Internal application migration to improve the customer tech stack and infrastructure. As a backend Node.js developer for the first half of the year, I helped to migrate databases and API endpoints with Snowflake, SAP HANNA, Graphana, etc.; after that, I improved features and fixed bugs on the React and Angular Frontend app. Two successful migrations for NodeTS and Angular internal apps for management and surveillance

Participation

- Migrated two internal applications from legacy technologies.
- Improved the client's infrastructure and tech stack.
- Optimized client processes for employees' frequent chores.
- Resolved several bugs and made application improvements.

Team

2 Back-end Developers, 1 Front-end, 1 QA tester, 1 Tech Lead/Architect

Tools

Azure DevOps, Postman, Graphana

Database

Snowflake, SAP HANNA

Technologies

Node.js, **React**, Express.js, Typescript, **Python**, **FastAPI**, Angular (13, 14, JS), Jest, InversifyJS, Nest.js, NGRX, RXJS, SCSS, Angular Material, Bootstrap, semantic HTML5, Apache Supertest.

End of Phase: Project completed and company-wide downsizing.

Software Engineer at **Perficient**

Colombia (Remote), Full-Time

April 2021 — November 2021

Project Roles

JavaScript & Python Developer

About Project

Syndication advertising management console that helps multinational IPG company clients manage audiences, syndicate, and make reports based on that data.

Responsibilities

- Understood the client's needs and translated them into software features.
- Improved the UX by advising the PO how the user feels and interacts with the application.
- Led the syndication module of the app for new implementations and support.
- Migrated styles to a new look and feel with deep CSS and SASS knowledge.
- Resolved several bugs and made application improvements.
- Optimized business needs through participation in Agile ceremonies with technical vision.

Team

6 FE developers, 7 BE developers, 5 testers, 2 Product Owners, and 1 Project Manager

Tools

VSCode, Postman, Slack, Jira, Github, Jenkins

Database

MySQL

Technologies

JavaScript, **Typescript**, **Python**, **Flask**, **React**, Angular (7 & 11), Bootstrap, Scss, Karma & Jasmine for unit test, with Sonar coverage, NGRX, RxJS, D3js, Lodash, CryptoJS, Sinon. Scrum, BEM, and Gitflow.

End of Phase: Accepted a new position with better growth potential.

Software Developer at SisteCrédito

Medellín (Hybrid), Full-Time

July 2020 — April 2021

Project Roles

Angular & Python Developer.

About Project

in the front-end payment gateway for natural person type clients, the web page of the company, and in the back-end a product recommendation system for an e-commerce web application.

Responsibilities

- Understood the company's needs and translated them into the software.
- Oversaw the development and support of a payment gateway client app.
- Participated in the new company web page development.
- Joined the creation of the Python Back-end Team.
- Involved in the creation of data services and product recommendation systems.
- Reduced company costs on the retirement of a third-party payment gateway by directly integrating payment methods
- Defined Python programming standards and good practices

Team

3 teams that usually involve 4 Developers, 1 tester, 1 DevOps, 1 Project Manager, and 1 Product Owner.

Tools

VSCode, PyCharm, Git, Firebase, NPM, Composer, Docker, WordPress, Azure DevOps

Technologies

JavaScript ES6, Angular (7, 10), semantic HTML5, Sass, **Python**, Flask, SQLAlchemy, Azure. Methodologies like Scrum, BEM, atomic design, mobile-first, and Gitflow.

Database

MySQL, MongoDB

End of Phase: Accepted a new position with better growth potential.

Software Developer at Educativ

Medellín, Contractor (Hybrid)

February 2020 — July 2020

Project Roles

Python Developer, **JavaScript** Developer.

About Project

PLEYADES (Exploration and Analytical Platform for Student Desertion) is a web-based information system that supports analyzing the student dropout prediction model. Through artificial intelligence, PLEYADES can predict, identify, and analyze possible dropouts among a group of students belonging to a program. It also offers valuable data visualization and statistics about the different levels in the academic industry, like the world, country, state, city, institution, faculty, educational program, and student.

Responsibilities

- Implemented, deployed, and maintained client web applications and APIs for various clients.
- Understood the client's business and turned its needs into valuable software.
- Implemented software to predict students' desertion.
- Developed data services with multi-databases to process data.
Deployment, maintenance, and support for web apps and APIs in the client's infrastructure.
- Improved deployment processes for Python web applications in different environments.
- Implemented the integration of APIs with several client databases.

Team

1 developer, 1 tester, 1 architect, and 2 project owners

Tools

VSCode, Git, and Gitlab for source control.

Technologies

Python, Flask, JavaScript, React, Angular 6 ES6, HTML5, CSS3, with jQuery, Bootstrap, Font Awesome, Plotly, Jinja2 templates, and the back-end in several libraries like Scikit Learn, Pandas, Numpy, JWT, JsonSchema, Nginx, and Apache web servers, using uWSGI and Gunicorn as web server gateway interfaces.

Database

MySQL, MS SQL Server

End of Phase: Contract and Project completed as planned

Software Developer Freelance

Medellín (Hybrid), Freelance

August 2018 — December 2020

Roles

Python, Node.js & JavaScript Developer, Database Maintainer, and Manual Tester.

Responsibilities

- Provided support for several applications with users within the academic context.
- Developed a web application for curricular management in modules like academic calendar, configuration, and administration.
- Implemented MENV and MERN architectures for projects in the informatics department.
- Improved the development and administration of the microcurriculum.
- Migrated relational and logical database diagrams for better understanding, visualization, and comprehension of models in Oracle Data Modeler.

Tools

Git, Gitlab, **Azure**, **AWS**, Mongo Atlas, VSCode, PyCharm, SendGrid, **NX**, Ionic, Twilio, Google Maps.

Technologies

React, **Node.js**, Angular (9, 11, 15,16,17), Vue.js, **Express.js**, **Nest.js**, **NGRX**, **RXJS**, Axios, NodeMailer, DotEnv, Angular Material, Vuetify, Vuex, md5, Crypto-js, Mongoose, Sequelize, and TypeORM. Jasmine, Jest, Karma, Sinon, and SuperTest for testing.

Python, **Flask**, **FastAPI**, Jinja3, Jinja2, SQLAlchemy, PyDantic, Typer, Bash, Docker, Nginx, AirFlow, Superset, JWT, OAuth, Auth0.

Database

PostgreSQL, MySQL, Oracle, MongoDB, and Snowflake.

End of Phase: Contract and Project completed as planned

EDUCATION

Bachelor's degree in Software Engineering

University of Medellín

Medellín, Colombia

August 2016 — March 2021

★ CERTIFICATES

- GCP Fundamentals: Core Infrastructure – Coursera
- EF SET English Certificate 65/100 (C1 Advanced) - EF Standard English Test (EF SET)
- Big Data in Action – University of Medellín
- Introduction to Node.js by Developing an Agile Project – Technologic of Antioquia
- Artificial Intelligence for Problem Resolution – EAFIT University
